

SEDA, leading manufacturer of vehicle drainage technology presents:

The „Airbag Master“, a universal air bag activating device supported by all ACEA members. The Airbag Master has been specially designed for the safe and controlled activation of all pyrotechnic devices contained in cars. It prevents the risk of inactivated devices finding their way in to the melting furnace. Time consuming manual removal is unnecessary.

Full activation of 2 phase ignitions found in some air bags or in pyrotechnic belt pretensioners is hard to determine visually. In such cases the Airbag Master is invaluable.

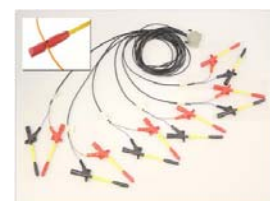

Leading car manufactures were involved in the specification, development and testing of the Air Bag Master.

- Suits all car types, past, present and future.
- Suitable for 12,24 and 42V systems
- Suitable for both direct and alternating current systems
- Indication of individual activation
- Acoustic and visual control
- Universal ignition cable for all car types
- Time saving individual adapter cables for different car types
- Individual activation for up to 24 air bags
- Easy to transport and set up
- Safe to use
- Functional and easy to use
- Designed especially with the dismantler in mind
- Future proof. supported by all leading car manufactures
